# **CARTER COUNTY**

# (Carter County Water Service Area Map)

- Estimated 1999 population of 26,700--85% on public water
- Estimated 2020 population of 30,000--95% on public water
- 390 miles of water lines, with plans for 180 additional miles
- Estimated funding needs for public water 2000-2005: \$26,900,000
- Estimated funding needs for public water 2006-2020: \$6,800,000

Carter County had an estimated population of 26,687 (10,610 households) in 1999 with a projected population of 30,000 (12,900 households) in 2020. Public water is provided to 9,550 customers, or about 85 percent of the county's residents. In areas of the county not served by public water about 4 of 5 households rely on private domestic wells and 1 of 5 households relies on other sources. About 1,350 households will be added to public water service through new line extensions in 2000-2020.

The City of Grayson Utilities gets it's raw water from the Little Sandy River and treats it's water at a 1.5 million gallon a day plant with an average daily production of 1,234,184 gallons. The treated water storage system consists of four storage tanks distributed throughout the service area with storage capacity of 1,710,000 gallons. The system has a current total of 3,140 service connections serving a population of 10,990. Six full time employees are currently employed by the system.

Some waterline extensions are now in progress, with others soon to come. These Extensions are based on increasing populations in the outlying areas around Grayson, and the continuing development both commercial and residential near the I-64--Ky-7 interchange at Grayson.

## **OLIVE HILL MUNICIPAL WATER WORKS**

PWSID:

Unaccounted-for Water 1997 (%):	

The City of Olive Hill serves a population of 7,491 with water, which is treated at their 1.3 million gallons per day treatment plant. The system storage capacity is 870,000 gallons. Raw water is drawn from a city-owned reservoir, which is permanent. There is also a seasonal surface source at Tygart Creek. Olive Hill has three water system operators. The system also purchases water from the Rowan County Water System in Rowan County, based on seasonal availability.

Olive Hill only has two relatively small waterline extension projects under consideration. These two lines are located at the far western part of the system would serve 18 households. Another line being considered would run from the water treatment plant to connect to an existing line near US-60. This would be a transmission line with customers possibly tapping into it later.

### **RATTLESNAKE RIDGE WATER DISTRICT**

Unaccounted-for Water 1997 (%):	10.89

The Rattlesnake Ridge Water District (RSRWD) serves a population of 5,577 people with 2,078 service connections. Water is purchased currently from the City of Grayson Utilities and is stored in its eight storage tanks throughout the system coverage area. The district has storage capacity of 786,000 gallons. RSRWD is multi-county by nature also serving customers in Elliott and Lawrence counties. The water system employs three full time water distribution system operators.

As part of their phase 1 expansion RSRWD is in the planning stages of building a new plant which will be located at Grayson Lake, and to also run a transmission line to service a new prison currently being built in Elliott county. Phase 2 of their expansion calls for new distribution lines to be built to service customers mostly in the northwest quadrant of the service boundary.

## **OTHER SYSTEMS**

#### **CAMP ROBERT C WEBB**

Camp Robert C Webb is located in Carter County. The system serves a population of 250 and has 1 service connection. The state, transient, non-community system has treatment capacity of 20,300 gallons per day.

#### PRIVATE DOMESTIC SYSTEMS

About 3,900 people in Carter County rely on private domestic water supplies: 3,100 on wells and 800 on other sources.

In the eastern half of the county most wells in valley bottoms produce adequate amount of water for domestic use. In the rest of the county ground water becomes more scarce with less than half of the wells drilled in valley bottoms able to produce sufficient quantities of water for a domestic supply. Throughout the county, wells on hillsides and ridges become progressively less productive as they move away from the valley bottoms.

Most of the water from drilled wells is very to extremely hard and contains noticeable amounts of iron. Salty water is commonly found in wells drilled less than 100 feet below the level of the principal valley bottoms.

A few springs supply sufficient quantities of water for domestic use. Almost all springs yield less than 5 gpm.
